Part 1 Indexing Facebook posts

- Requirements
    - For every Facebook page we can get its feed. A feed is a list of posts.
    - We are interested in the following fields of a post object
        - id
        - message
        - link
        - name
        - caption
        - description

    - Download the first 1000 posts for the nytimes page
    - Save them in a file so we can easily verify that the posts are uniques
    - Use any programming language or stack you would like
    - Some help
        - API reference for the page feed end point
          https://developers.facebook.com/docs/graph-api/reference/v2.5/page/feed/
        - Easy to use console for fast interaction with the Facebook API
            - https://developers.facebook.com/tools/explorer
